pir60 1:pir1 2:pir2 3:pir3 4:pir4 Database:

Mean 20.516; Variance 23.884; scale 0.859 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#T A disulfide bond is required for full activity of atriopeptins.

T Several active peptides may be derived from the carboxyl region of this precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           #domain signal sequence #status predicted #label SIG\

ALIGNMENTS	RESULT 1 ID P50493 standard; protein; 88 AA. AC P50493; DT 18-MAR-1992 (first entry).		PT secretion Scalar 22; Page 16; 35pp; German. CT This variant of the peptide described in P50491 has a mol.wt. CC This variant of the peptide described in P50491 has a mol.wt. CC of 13,000 and an isoelectric point of 6-6.5. This peptide CC of 13,000 and an isoelectric point of 6-6.5. This peptide CC partial bromeyan separation between the Met groups and CC partial bromeyan separation between the Met groups and CC vasomuscles. It also affects sweat secretion and can be used for CC the diagnosis and therapy of hypertension. It can also be used for CC the treatment of post-operative cardiovascular disorders, skin CC diseases, etc. The hormone may be prepared from a heart atrium CC extract. See also P50491-2. The precursor of human gamma-ANP and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQS encoding them (N50020, N50055). The 26Asn-151Tyr fragment has a direttic action so is useful as a hypotensive/antihypertensive agent. The usual dose is 0.
        The inventors claim a polypeptide comprising atrial natriuretic/vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encocing DNA sequence is also claimed. The claimed polypeptides are natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-aldosterone system. Dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Monoclonal antibodies recognising gamma-atrial natriuretic used for diagnosis of diseases eg kidney and heart disease. Used for diagnosis of fiseases eg kidney and heart disease. Bisclosure, Fig.1; 10pp; English. Gamma-hANP of Which the N-terminal 25 AAs are recognisy monoclonal antibodies of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-SEP-1991 (first entry)
Sequence of human gamma-atrium natriuretic polypeptide (ANP).
Natriuretic; diuretc; hypotensive; antihypertensive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB; N50055.
New DNA sequences from human atrium cordis - coding for new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 126;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  refugent of hypertension and related disorders - with synthetic peptide fragment of atrial natriuretic factor pro:hormone of solumn 4: 19pp; English.

Disclosure; Column 4: 19pp; English.

This sequence represents the human atrial natriuretic factor prohormone (proANF). Fragments of this sequence (see W44521'W3452) can be used in the mathod of the invention. The method is for treating hypertension, congestive heart failure, pulmonary odedma, toxemina of pregnancy, nephrotic syndrome, acute and chronic renal failure or hepatic cirrhosis with or without ascites comprises administering a synthetic peptide on the proant of amino acids 1:30, 31-67 or 79-98 of proANF. The peptides proANF(1-30) and proANF(3-199) can also be used in a method for treating hyperkalaemia associated with acidosis, digitalis overdose, succinylcholine, insulin deficiency, acute or chronic renal failure, duretic, natriuretic and/or kalluretic activity.

New atrial poly:peptide cpds. - useful as natriuretics,
diuretics, vasodilators and modulators of the
renin-angiotensin-aldosterone system

New DNA sequences from human atrium cordis - coding for new dirretic polypeptide or precursor cpds.

directic polypeptide or precursor cpds.

The precursor of human gamga-shap and its 26Asn-151Tyr fragmentare claimed (P50036, P50037), as are the DNA SQs encoding them (N50020,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 1A; 45pp; English.

This sequence is encoded by the human pre-pro atrial natriuretic/vasodilator peptide (ANVP) DNA. Fragments of this protein and the corresponding sequence in rat (see also R36936), may be used for regulation of fluid volume and blood pressure in host organisms. The ANVP fragments may be produced by solid-phase techniques. See also R36937.78.
                                                                                                                                                                                  Human, pre-pro, atrial natriuretic/vasodilator peptide; ANVP; rat; regulation; fluid volume; blood pressure.

Physio-active peptide derived from birds - has cysteine bridge, specified As sequence and diuretic and antihypertensive properties. Disclosure: Fig 14; 16pp; Japanese.
This sequence has 99 amino acid residues homologous to the pre-changsee also Q03466-Q03468, R03301 and R03402.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polypeptide cpd. - useful as natriuretic, diuretic and/or vasodilator in mammals
Disclosure; Fig 1B, 45pp; English.
This sequence is encoded by the human pre-pro atrial natriuretic/vasodilator peptide (ANVP) cDNA. Fragments of this protein and the corresponding sequence in rat (see also R3695), may be used for regulation of fluid volume and blood pressure in host organisms. The ANVP fragments may be produced by solid-phase techniques. See
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

DNA sequences, useful as antihypertensive agents.
Disclosure; Fig. 13; 45pp; English.
The DNA encoding the cardiodilatin is carried on plasmid pHANR48.
Cardiodilatin is a muscle relaxant, so is useful as an antihypertensive agent: The DNA is obtd. from RNA isolated from the human heart.

This sequence was Isolated from a cDNA library prepared from
poly(A) mRNA isolated from human heart. Sequences complementary
to the DNA encoding MERIG of cardionatrin were isolated using
a mixture of oligonucleotide probes. Two plasmids, phAVD and phMANP,
identified by this screening process, were then used to transform
E coll which were cultured to produce the peptide.
                                                                                                                                                                                                                                                      Gaps
individuals at risk of hypertension and permits early therapeutic measures to prevent the fatal symptomology of the disease. The section of the genome which is fingerprinted or otherwise subject is study using the results is dependent on the nature of the probe. The probes useful in the present invention are selected from the renin, kallikrein, or ANF gene (see FT).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            03-AUG-1992 (first entry)

                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                         New atrial poly:peptide cpds. - useful as natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-addosterone system (21aim 7; Page 115; 144pp; English.

The inventors claim a polypeptide comprising atrial natriuretic/vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DNA sequence is also claimed. The claimed polypeptides are natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-aldosterone system. Dose is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               N-PSDB: N50695, N60763.

New atrial poly:peptide cpds. - useful as natriuretics, diuretics, vasodilators and modulators of the renin-angiotensin-aldosterone system

Example: Fig 1A: 144pp: English.

The inventors claim a polypeptide comprising atrial natriuretic/ vasodilator polypeptide (ANVP), pro-ANVP or pre-pro-ANVP, or their fragments. The encoding DANS sequence is also claimed. The claimed polypeptides are natriuretics, diuretics, vasodilators and modulators of the renin-anglotensin-aldosterone system. Dose is

Patent No. 5767239

GENERAL INFORMATION:
APPLICANT: IMMER, Hansueli
APPLICANT: ADERMANN, Wolf-Georg
APPLICANT: ADERMANN, Knut
APPLICANT: ALESSEN, Christian
TITLE OF INVENTION: PROCESS AND INTERNEDIATE PRODUCTS FOR
TITLE OF INVENTION: PREPARING CARDIODILATIN FRAGMENTS, AND HIGHLY PURIF.
TITLE OF INVENTION: CARDIODILATIN FRAGMENTS, AND HIGHLY PURIF.
NUMBER OF SEQUENCES: 5
                APPLICANT: Oare, pavid
APPLICANT: McDowell, Robert S.
APPLICANT: McDowell, Robert S.
APPLICANT: Burnier, John
TITLE OF INVENTION: PECEPTOR SPECIFIC ATRIAL NATRIURETIC
TITLE OF INVENTION: PEPTIDES
NUMBER OF SEQUENCES: 47
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 32;
